Task: Admin Dashboard with User & Product Management Using PHP and MySQL

📊 Dashboard Requirements

1. User Management

- **Display all registered users in a table.**
- **Create: Add a new user.**
- **Read: View all users.**
- **Update: Edit user information.**
- **Delete: Remove a user.**
- **Never display user passwords.**

2. Product Management

- **Display all products in a table.**
- **Create: Add a new product.**
- **Read: View all products.**
- **Update: Edit product information.**
- **Delete: Remove a product.**

Each product should include:

- **Product name**
- **Description**
- **Price**
- **Quantity**
- **Created date**

3. Dashboard Layout

- **Display navigation links or sections for Users and Products.**
- **Show the total number of users and products.**
- **Display user and product tables within the dashboard.**

- **Include forms to add and edit users and products.**
- **Provide a logout button.**

🛠️ **Technical Requirements**

- **HTML & CSS: Build the forms, tables, and dashboard layout.**
- **PHP: Handle CRUD operations and sessions.**
- **MySQL: Store users and products.**
- **SQL: Use INSERT, SELECT, UPDATE, and DELETE queries.**
- **Security: Use prepared statements and session management.**
- **Validation: Validate required fields and prevent duplicate user emails.**
