Task: User Registration and Login System Using PHP & MySQL

🎯 Learning Objective

Create a registration and login system using PHP and MySQL to store user data, validate login credentials, and display all registered users after successful login.

Registration Page

- Create a form to register a new user.
- Save user information in the MySQL database using SQL queries.
- Prevent duplicate email addresses.

Login Page

- Allow users to log in using their email and password.
- Use SQL queries to check whether the user exists and the credentials are correct.
- Display an error message if the login fails.

Users Page

- After successful login, display all registered users from the database.
- Use an SQL SELECT query to retrieve and display user information.
- Do not display users' passwords.

Technical Requirements

- HTML and CSS for the forms.
- PHP for handling requests and database operations.
- MySQL for storing user data.
- SQL queries for inserting, checking, and retrieving data.
- PHP sessions to maintain the user's login state.
- Use password hashing and prepared statements for security.
