HTML forms, GET/POST, PHP validation, objects, sessions, and cookies.

1. Create the Registration Form

Create a registration form that includes:

- Full Name
- Email
- Mobile
- Governorate
- Track
- Skills
- Message
- Terms & Conditions
- Register button

Use the provided HTML and CSS as your starting point.

---

2. GET Form – Search

Create a separate search.php page with a simple search form.

The form should use **GET**:

search.php?q=javascript

Read the search value using:

$_GET

Display the searched keyword on the page.

Example:

Search result for: JavaScript

---

3. POST Form – Registration

The registration form must use **POST**:

<form method="post">

When the user submits the form:

1. Collect the submitted data using $_POST.
2. Clean the input using trim().
3. Validate all required fields.
4. Display an error message beside each invalid field.
5. Keep the user's previous values when validation fails.
6. If everything is valid, process the registration.

---

4. Form Validation

Implement validation in PHP.

Examples:

- Full Name → required
- Email → required and valid email format
- Mobile → required and valid format
- Governorate → must be selected
- Track → one option must be selected
- Skills → at least one skill should be selected
- Terms → must be accepted

Remember: Do not rely only on HTML validation. The real validation must happen in PHP.

---

5. Save Data in an Object

After successful validation, create an **object** containing the user's registration data.

For example, your object could contain:

name

email

mobile

governorate

track

skills

message

Display the submitted information after successful registration.

⭐ Session

After successful registration, save the registration data in a **PHP Session**.

On another page, display the user's registered information from the session.

⭐ Cookies

Save one piece of user information in a **Cookie**, such as:

- Name
- Email
- Selected Track

When the user visits the page again, use the cookie to display or pre-fill the saved information.
